UNITED STATES DEPARTMENT OF COMMERCE  
Patent and Trademark Office  
ASSISTANT SECRETARY AND COMMISSIONER OF PATENTS AND  
TRADEMARKS  
Washington, D.C. 20231

Paper No:2

Serial Number: 09/778481

Filing Date: February 2,2001

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

2. The drawings are objected to because the blank rectangular boxes and/or merely numbered boxes of figures 1-6 must be labeled, see 37 CFR 1.83(a). This allows identification of the drawing element without consulting the text of the specification. Correction is required.

3. Applicant is required to update references to co-pending applications.

4. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

5. Claims 1-11 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The

Art Unit: 2837

instant specification pages 6-10, merely gives examples of placement schemes for the inspection device and clearly states on page 6, lines 7-11 and page 10, lines 3-9, that the particular location for the inspection device is subject to interpretation and that "those skilled in the art will be able to take into account the various factors that indicate ideal placement of an inspection device in a particular situation". It cannot be seen how this would comprise a structural limitation or method step.

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yamazaki et al (5731528).

Yamazaki et al teaches in figures 1-27, an inspection device for elevator ropes.

A hoist rope 1 connects a car 2 and counterweight 4 over pulleys and sheaves 21-23. A portable wear detector 20 and computing means 13 determine the rope tension and associated wear. The detector 9 of the measuring device, can be mounted at any level of the rope 1. Col. 10, lines 46-57 state that the detector is not limited by placement on the rope. Figure 12, illustrates a mount near the car frame 3 on a mounting band 38. Figures 17,18 illustrate the movement of the detector allows for the determination of wear detection in the guide sheave 22. Figure 19 illustrates the use of multiple detectors to reduce error. Within the Background of the Invention, it is further stated that prior art devices mount the sensor near the middle of the rope but further states that the length of the rope makes the selection of the mounting requires careful consideration.

Art Unit: 2837

As stated above, the sensor can be placed to determine any wear point.

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Olsen et al., O'Donnel et al.'845,'176, Ericson et al., Colton et al., Vanhala, Smith et al., and Yamagami are cited to illustrate similar wear sensors for elevator roping systems.

9. Any inquiry of a general nature or relating to the **status** of this application or **filed papers** should be directed to the Group receptionist whose telephone number is (703) 308-0956.

Papers related to this application may be submitted to Group 2800 by facsimile transmission. Papers should be faxed to Group 2800 via the PTO 2800 Fax Center located at Crystal Plaza 4. The faxing of such papers must conform with the notice published in the Official Gazette, 1096 O.G. 30 (November 15, 1989). The Group 2800 CP 4 Fax Center number is (703) 308-77(22 or 24).

For assistance in Patent procedure, fees or general Patent questions calls should be directed to the Patents Assistance Center (PAC) whose telephone number is 800-786-9199. Assistance is also available on the Internet at [www.uspto.gov](http://www.uspto.gov).

For requesting **copies** of Cited Art, Office Actions or the like, or General Problem solving, calls should be directed to the TC 2800 Customer Service Office whose telephone number is 703-306-3329 or by fax at 703-306-5515.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jonathan Salata whose telephone number is (703) 308-3120. The examiner can normally be reached on Monday through Thursday from 6:30 am to 2:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Nappi, can be reached on (703) 308-3370.
